

## HUMAN-SIZED FROGS

Large human-sized Frogs are the size of an adult human. There is a range in size here, but generally speaking, the size would be comparable to that of an adult man or woman. Thus, a standing Frog would be between 5 to 6 feet tall. A seated Frog would be a little over 4' high. A Frog might be a little smaller or larger than this and still fall into the range of "human-sized" copper Frog.

## HUMAN-SIZED SEATED FROGS

### Seated Frogs

Basic: Book, bench, musical...

For seated Frogs with more complexity and/or large props such as large musical instruments, a cello, for example, an additional \$200 to \$800  
\$3,500

Seated Frogs for permanent public display  
\$3,800

Bacchus Toad and extra large seated frogs  
\$3,800

Bacchus Toad and other extra large seated frogs for permanent public display  
\$4000

Parent and Child Book Frog  
\$4,200

## HUMAN-SIZED STANDING FROGS

### Standing Frogs

Basic: Fisherman, musical, beverage, golfer...

For standing Frogs with more complexity and/or large props such as large musical instruments, a cello, for example, an additional \$200 to \$800  
\$3,700

Standing Frogs for permanent public display  
\$3,800

All standing human-sized Frogs (unless otherwise specified) are securely welded to a 1/4" stainless steel base. They can easily be bolted wherever they would be placed.

Lantern Frog  
\$3,800

Standing Bass Frog  
\$4,200

Musical Trio  
Bass, flute, and violin  
\$9,750

## PERSONALIZED FROGS

A Frog can be made to resemble someone or have a special pose and theme. This requires additional time, attention, labor, and materials. A work can be made to be "site specific" so that the Frog is made to exact specifications according to how and where it will be placed. The additional cost for this:

Seated  
\$400 to \$600

Standing  
\$500 to \$700

Public sculpture follows different guidelines for pricing and has already been addressed.

## ADDITIONAL COSTS AND ADORNMENTS

### Added Props

Most Frogs already have a prop. But if we make another prop or adornment, there is an additional cost. For the objects themselves, with no Frog, add 25%.

Goblets and other simple objects

\$125

Golf clubs, easels, and other large, simple objects

\$350

Musical instruments

\$425

Larger, more complicated objects must be treated similarly in cost as would a Frog itself. Look at the cost of a Frog the size of the object for approximate cost on large, complicated objects.

### Dragonflies and Butterflies

They can adorn the sculpture. They can be attached or free standing.

Dragonfly

small

wingspan 6.5"

\$75

medium

wingspan 12.5"

\$325

large

wingspan 22 "

\$650

Butterfly

small

wingspan 6.5"

\$125

medium  
wingspan 12.5"  
\$525

large  
wingspan 22 "  
\$675

### Mounts

The mounts are made of copper and have bases made of stainless steel. These bases can easily be bolted to wherever the sculpture will be placed.

### Mushroom

small  
8" high  
\$50

medium  
13" high  
\$130

large  
22" high  
\$325

### Grass Blades

small  
12" high  
\$125

medium  
22" high  
\$225

large

34" high

\$325

## Flowers

small

12" high

\$175

medium

22" high

\$275

large

34" high

\$400

## For Book Frogs

stainless steel

pages hand engraved

basic \$300

2 pages basic \$400

complex 2 page spread \$600

elaborate art \$800

For smaller books for  
smaller Frogs, depending on  
the size of the frog and  
complexity of the engraving:  
\$50 to \$575

Large human-sized Frogs are the size of an adult human.  
There is a range in size here, but generally speaking, the  
size would be comparable to that of an adult man or woman.  
Thus, a standing Frog would be between 5 to 6 feet tall. A Frog  
might be a little smaller or larger than this and still fall into  
the range of "human-sized" copper Frog.

## SEMI-LARGE FROGS

These Frogs are essentially "human-sized". They are just a little smaller than the big, human-size Frogs. Think of them as the size of a human teenager not quite fully grown. This is a nice, intimate size that achieves much of what the large Frogs do, but can fit in a smaller space. These are still large Frogs, just not as big as the adult human-sized Frogs. But as anyone who has witnessed a growing teenager can tell you, this is a good sized Frog. As with the adult human-sized Frogs, there is a range in size. Approximate height of a standing semi-large Frog would be 4' 8". A seated semi-large Frog would be 3' 3".

Semi-large Frogs would be 25% less than the large, human-sized Frog. Thus, a typical seated human-sized Frog at \$3,500 would be \$2,625 if it were a semi-large Frog instead of a large Frog.

## MID-SIZED FROGS

This type of Frog is half the size of a large, human-sized Frog. It is still big for a Frog sculpture, but it is not human-sized. Such Frogs are the size of human children.

Thus, a standing mid-sized Frog would be between 2.5 to 3 feet tall. A seated mid-sized Frog would be a little over 2 feet high.

Mid-sized Frogs are 55% less than the large, human-sized Frog. Thus, a typical seated human-sized Frog at \$3,500 would be \$1,575. These Frogs are a more than half less the large Frogs. One reason is that they require less reinforcing. Generally, when scaling up, the complexity of a project increases substantially. All Frogs are durable and sturdy and will last the test of time.

## SMALL FROGS

Small Frogs are again half the size of the mid-sized Frog. Though a small Frog is no longer large, it is still much larger than a real frog. It will stand out and be noticeable, especially if you put it in a prominent place.

A standing Frog would be between 14 to 18 inches tall. A seated Frog would be a little over 1 foot high.

A small Frog is 82% less than a large, human-size frog. Thus, a \$3,500 seated Frog would be \$630.

## LITTLE FROGS

Seated Little Frogs are approximately 9 inches tall. Standing Little Frogs are approximately 7 inches high.

These Frogs are between \$325 and \$425.

## FIGURINE FROGS

These Frogs are 7 inches high and smaller. They are \$325 and less.
